

Robust and vandalism-proof

- **Robust**
- **Stable**
- **Safe**
- **Durable**

Thanks to its high-quality, strong steel mesh panel the Pallas welded mesh fencing has secured a place of its own among chainlink fencing and bar fencing systems. Pallas has been developed specifically for heavy-duty requirements. The fine mesh structure makes these fences virtually impossible to climb over. The centre-to-centre distance between the posts is only 2,510 mm, which significantly improves the fence's stability. The modular structure enables the fence to compensate for height variations in the terrain. In addition to using the stainless steel fixation sets, the wire mesh panels can also be hung from the posts (patent pending).

Attractive appearance:
integrated with the landscape

High security action:
use of solid steel wires

Wide application: also in
combination with access gates
