

Profiled stability

- **Robust**
- **Stable**
- **Safe**
- **Durable**

The Triton welded mesh fencing is characterized by its attractively profiled mesh panel. This not only lends the Triton a modern and representative appearance, but it is also highly functional. The mesh width of the Triton panel makes these fences virtually impossible to climb over. The panel stability is improved by the distance between the posts. The centre-to-centre distance between the posts is only 2,505 mm. In addition to using stainless steel fixation sets, the wire mesh panels can also be suspended from the posts (patent pending).

Versatile: Wide application:
e.g. also for car parks
